

Identity for Marginalized Community

How marginalized communities use Privado ID to create secure digital identities, providing access to essential services while safeguarding their privacy.

Marginalized communities in Southeast Asia often lack secure digital identities, making it difficult for them to access essential services.

Promote inclusion, enable access, and protecting privacy

To promote inclusion, enable access, and protect privacy, they use Privado ID to:

- Issue decentralized identities (DIDs) to help marginalized communities access services.
- Provide secure, privacy-focused identity management through the Privado Wallet SDK.
- Use Verifiable Credentials (VCs) to provide trusted, verifiable identity data.

This case study demonstrates how Privado ID can transform identity management for marginalized communities, promoting inclusion and access to vital services.
